

**ANNUAL DRINKING WATER QUALITY REPORT FOR 2009  
PARKWAY WATER COMPANY, INC.**

**PWSID 0080035**

**June 21, 2010**

We are pleased to provide you with this year's Annual Water Quality Report and to report that our drinking water is safe and meets federal and state requirements.

We want to keep you informed about the excellent water and service we have delivered to you over the past year. Our goal is and always has been to provide to you a safe and dependable supply of drinking water.

Our water source is one well, whose depth is approximately 790 feet. This well draws from the Patapsco Aquifer. It was developed by Calvert Well Drilling Company in 1987.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or manmade. As water travels over the land or underground it can pick up substances or contaminants such as microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. Some people may be vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune disorders, some elderly, and infants can be particularly at risk from infection. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the SAFE DRINKING WATER HOTLINE (800-426-4791).

We constantly monitor the water supply for various contaminants. We have detected radon in the finished water supply in one out of one sample tested. There is no federal regulation for radon levels in drinking water. Exposure to air transmitted radon over a long period of time may cause adverse health effects.

MCL'S (Maximum contaminate levels) are set at very stringent levels. To understand the possible health effects described for many contaminants, a person would have to drink two liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

We are proud that your drinking water meets or exceeds all Federal and State of Maryland requirements. We have learned through our monitoring and testing that some contaminants have been detected. The EPA has determined that your water IS SAFE.

We are urgently in need of an additional licensed person to operate our water system. The State is offering free classes for anyone interested in obtaining their operator's license.

Thank you for allowing us to continue providing you family with clean, quality water this year. In order to maintain a safe and dependable water supply we sometimes need to make improvements that will benefit all our customers. These improvements are sometimes reflected as rate structure adjustments. Thank you for understanding.

If you have any questions about this report or concerning you water, please contact Mary Willingham, Operator of Parkway Water Company at 301-932-0282. We want our residents to be informed about their water. To learn more, please attend our annual meeting. You will be informed via U. S. Mail of the date.
